

Stream Manager Run Sheet

Amanda & Liam's Wedding · Wednesday 14 October 2026
Hillstone St Lucia, QLD

Ceremony time	4:00 PM AEST
Go live at	3:45 PM (15 min early)
Expected end	~4:20 PM
Streaming app	EventLive (already set up — just open and press play)
Streaming phone	Already configured — do not change any settings
Phone PIN	7899
Mandy's mobile	0402 990 112

Look for this app on the streaming phone:

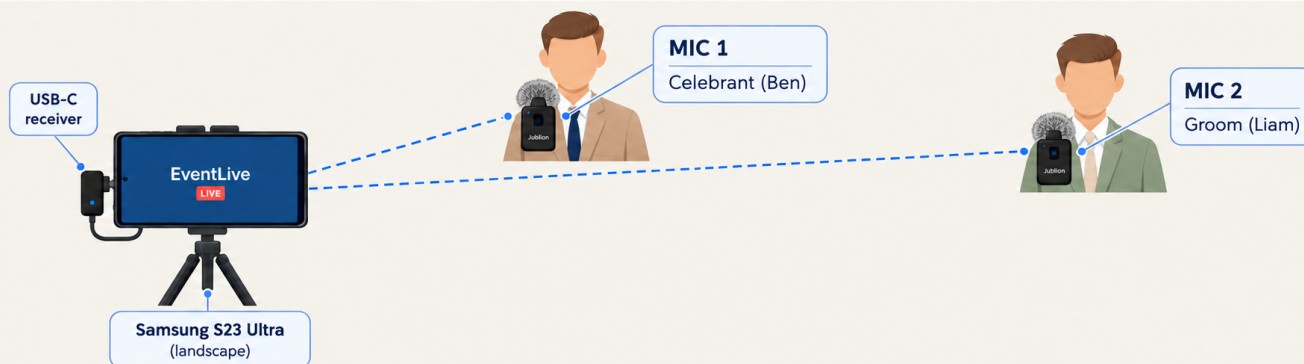

EventLive — the coral "e" icon. It's already set up and logged in. Just open it and tap your event.

Equipment checklist

Confirm you have all of this before leaving for the venue.

- Streaming phone (charged to 100%, EventLive already set up)
- Phone tripod with mount (tabletop or full-height — see camera position below)
- Jubolion wireless mic kit — 2 x clip-on transmitters, 1 x USB-C receiver, 2 x furry wind covers
- Power bank + USB-C cable (backup power)
- Your own phone (to verify the stream is working)

MICROPHONE PLACEMENT — DEVICE SETUP

Samsung S23 Ultra
(landscape)

USB-C receiver
(connected to phone)

Wireless connection
(both mics to phone)

Jubolion transmitter
(x2)

Furry wind covers
(x2)

Wind covers on BOTH mics —
essential outdoors.

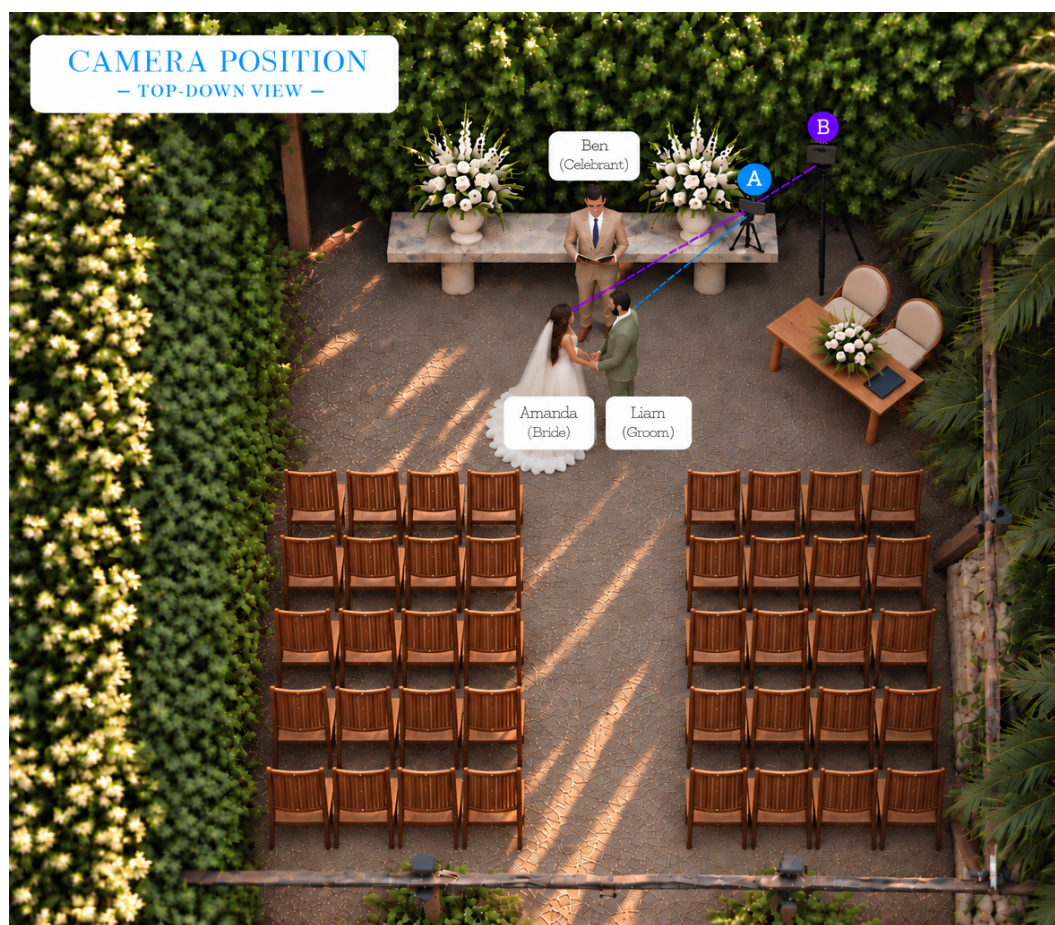

Wedding day timeline

2:30 PM — Arrive at Hillstone

1 Scout your camera position — choose Option A or B

Both options are behind the celebrant, offset to Liam's side so Ben doesn't block the shot. The camera is angled toward the bride — Amanda's face is on-camera, Liam is in profile.

- **Option A — Tabletop tripod on the concrete table:** Tuck a small tabletop tripod to one side. Closest, most discreet, best angle. May appear in wide photographer shots.
- **Option B — Full tripod behind the table:** Stand it on the ground behind/beside the table, against the hedge. Further back but out of the photographer's way.
- Whichever you choose, offset to the groom's side (left as you face the guests)
- Tap to lock exposure on where the couple will stand — the dark hedge behind them can cause silhouetting

KEY

Samsung S23 Ultra
(landscape on tripod)

Option A
Tabletop tripod on table
(closest, most discreet,
best angle).

Option B
Full tripod behind table
(further back, out of
photographer's way).

--- **A** Camera line of sight
(angled towards couple).

--- **B** Camera line of sight
(to couple).

Bride & Groom
(standing close together,
facing each other).

Celebrant (Ben)
(not blocking view.).

Large floral arrangements
(white delphiniums, white
roses & greenery).

Guest seating
5 rows of 4 chairs per side
(8 guests per row).

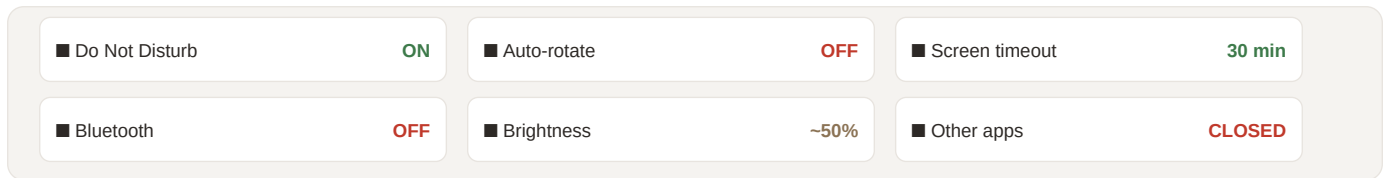

Signing table & chairs
(angled 30–45°
facing couple).

3:00 PM — Set up equipment

2 Prepare the streaming phone

Before mounting on the tripod:

- Confirm battery is above 90%
- Turn on **Do Not Disturb** (blocks calls and notifications)
- Turn off **Auto-rotate** (lock to landscape)
- Set screen brightness to ~50%
- Set screen timeout to **30 minutes** or "Keep screen on"
- Close all other apps
- Turn off Bluetooth (Jubolion uses USB-C, not Bluetooth)

3 Mount the phone on the tripod

Attach in **landscape (horizontal)** orientation. Keep the phone case on — it protects the phone if the tripod gets bumped and won't affect a standard mount.

- **Eye-level framing:** If placing the tripod on the ground, extend it to roughly 1.5–1.7 metres.
- **Lock focus and exposure:** Once the phone is mounted, tap and hold on the spot where Amanda and Liam will stand until the focus locks. This stops the camera hunting for focus if guests move in the foreground.
- Frame the ceremony area centred with a little headroom above

3:15 PM — Attach microphones

4 Clip mics onto Celebrant and Groom

Turn on both transmitters. Attach furry wind covers to both mic heads first.

- **Mic 1 → Celebrant (Ben):** Clip to collar or lapel, 15-20 cm below chin. Mic head points up. Tuck transmitter in jacket or clip to belt.
- **Mic 2 → Groom (Liam):** Clip to **left** lapel, facing where the bride will stand.

5 Plug the USB-C receiver into the phone

Plug the small USB-C receiver into the bottom of the streaming phone. Transmitters should auto-pair (solid LED = connected, flashing = still searching).

3:30 PM — Final checks

6 Open EventLive and verify

Open the EventLive app. You should see the scheduled event. Tap into it and check the camera preview.

- Camera shows the ceremony area in landscape
- Audio is working — ask Ben or Liam to speak and check the audio indicator in the app
- If audio isn't picking up the lav mics, unplug and replug the USB-C receiver

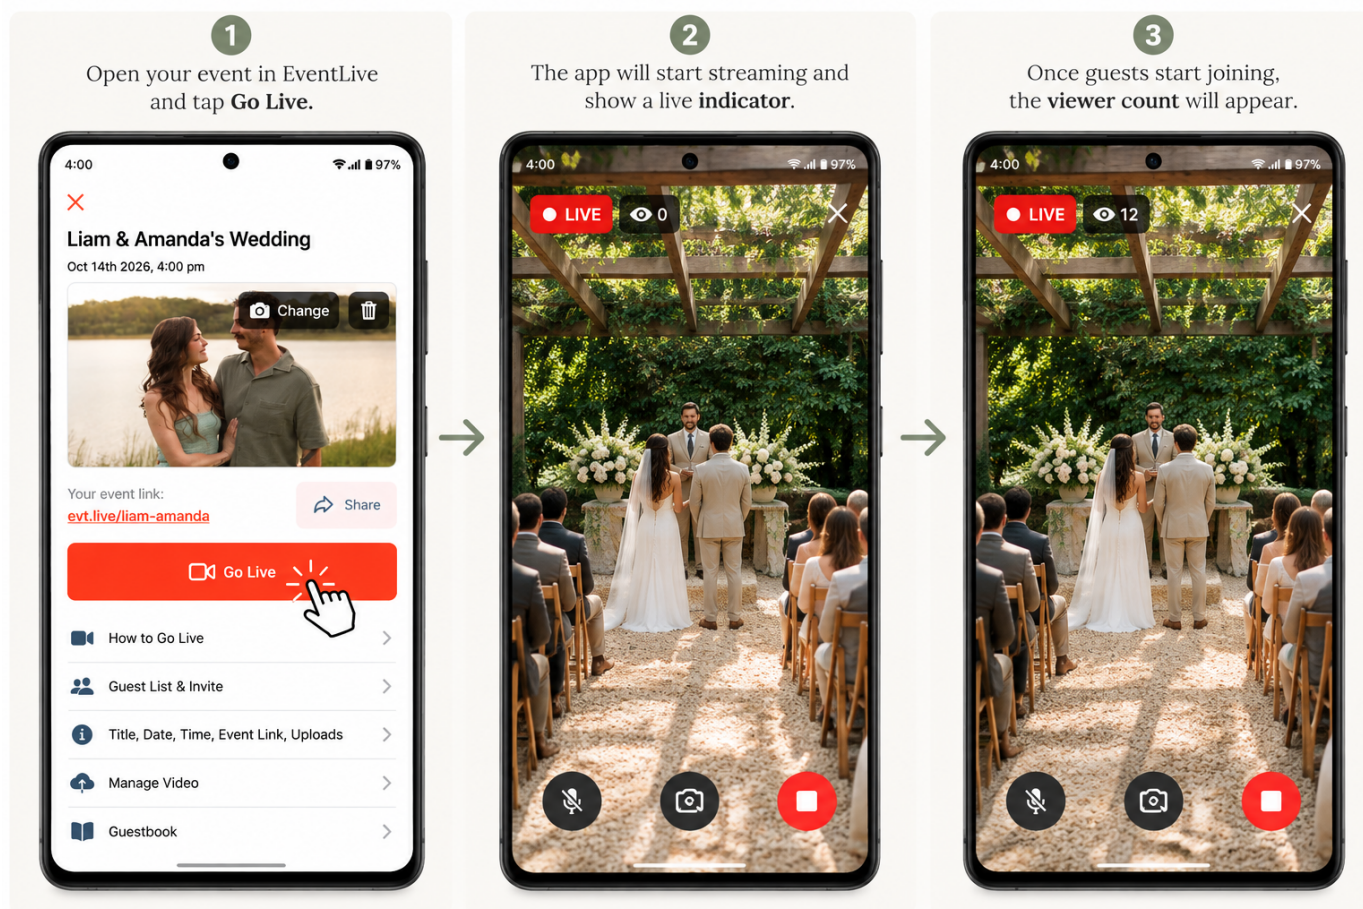

Audio check is the most important step. If the lav mics aren't being detected, unplug/replug the USB-C receiver. The phone's built-in mic will work as a last resort — not as crisp, but better than silence.

3:45 PM — Go live

7 Start the stream

In EventLive, tap the **Go Live** button. The app will show a live indicator and a viewer count once guests start joining.

8 Verify on your own phone

On **your personal phone**, open the EventLive guest link. Confirm video and audio are working. There will be a short delay — that's normal.

4:00 PM — Ceremony begins

9 Hands off — monitor from a distance

Do not touch the streaming phone. Stay nearby but out of frame.

- Make sure no one bumps the tripod
- If a call comes through despite DND, do NOT answer — let it ring out
- Music will play through the stream without any copyright issues

~4:20 PM — Ceremony ends

10 End the stream

Wait until the couple has walked back up the aisle.

- Walk to the streaming phone
- Tap the stop button in EventLive
- Wait for confirmation the stream has ended
- The recording is automatically saved to the same event link

11 Collect the microphones

Retrieve both transmitters from Ben and Liam. Turn them off. Unplug the USB-C receiver.

That's it. EventLive automatically saves the recording to the same event link. Guests who missed it live can rewatch later — the recording stays available for up to a year.

Troubleshooting

Don't panic. Most issues are fixable in under a minute.

Stream dropped

EventLive supports pause and resume to the same link. Tap the go-live button again. Viewers see a brief interruption but the stream resumes at the same URL.

No audio from lav mics

Unplug and replug the USB-C receiver. If still nothing, check that both transmitters are turned on (solid LED). As a last resort, the phone's built-in mic will pick up general ceremony sound.

Phone overheating

Reduce brightness to minimum. Make sure the phone is in shade under the pergola. If it shuts down, let it cool for 2 minutes then reopen EventLive and resume.

Battery dying

Plug in the power bank. This only works if the USB-C port is free — if the Jubolion receiver is using it, you cannot charge during the stream. Start at 100%.

EventLive app crashes

Reopen the app and tap Go Live again. The event link stays the same. If repeated crashes, open the event link in Chrome as a last resort — the browser viewer still works.
